# The Elements

The Five Elements Theory is a Chinese philosophy that outlines the interactions and relationships between things. The five elements – Wood, Fire, Earth, Metal, and Water. They are believed to be the fundamental elements of everything in the universe.

Wood feeds Fire, Fire makes Earth, Earth creates Metal, Metal holds Water, and Water nourishes Wood. Wood roots Earth, Earth dams Water, Water extinguishes Fire, Fire melts Metal, and Metal cuts Wood. Each element both controls and is controlled by another element.

**W**ood is the most human of the fivefold conceptual scheme. It is the element of spring and symbolises the creative urge to achieve. It is associated with the power to look forward, plan and make decisions, hence growth and development. Wood energy is rising and expanding, and is the force of growth and vitality. Therefore, the colour representing Wood is green.

It indicates patience, reliability, and rationality and is considered as an energetic element.

It is the force of gravity, the minerals within the earth, the patterns of the heavenly bodies, and the powers of electrical conductivity and magnetism. Metal has a structure but can be reformed after melting and molding. The energy of metal consolidates with inward movements, like a flower closing its petals. White is used to represent this element. Metal's motion is based on forcefulness, strength, self-reliance, and sophistication.

Water's motion is downward, fluid, secretive, intuitive, compassionate, sensitive, gentle, and creative.
